SUMMARY

Computer Science undergraduate graduating in 2027 with hands-on experience building AI, computer vision, NLP, and automation applications in Python and C++. Strong problem-solving foundation in data structures, algorithms, object-oriented programming, and debugging. Experienced in turning requirements into working end-to-end solutions, optimizing performance, and automating repetitive workflows. Demonstrated builder mindset through projects with measurable gains in accuracy, latency, throughput, and manual effort.

TECHNICAL SKILLS

Programming: Python, C++, Java, SQL, C

Problem Solving: Data Structures and Algorithms, Object-Oriented Programming, Algorithmic Thinking, Debugging, Performance Optimization

AI/ML: CNN, Computer Vision, Image Classification, NLP (Basics), Data Preprocessing, Model Evaluation

Automation and Systems: Robotic Process Automation, Real-Time Processing, PyAutoGUI, Pyperclip

Tools: Git, GitHub, VS Code, Jupyter Notebook, Tableau

PROJECTS

Skin Cancer Detection using AI | *Python, CNN, OpenCV, Image Classification*

Personal Project

- Built an end-to-end image classification pipeline on 10,000+ dermoscopic images, translating a real-world detection problem into a working AI solution.
- Designed preprocessing with normalization, augmentation, and segmentation, improving model accuracy by 18%.
- Achieved 92–95% accuracy and reduced inference time by 40% through performance-focused optimization.
- Evaluated model behavior and iterated on the pipeline to improve prediction reliability and execution speed.

WhatsApp Chatbot | *Python, RPA, NLP, PyAutoGUI*

Personal Project

- Built a Python automation workflow that processed 100+ interactions per session and handled message processing end to end.
- Integrated basic NLP capabilities to generate responses in more than three languages.
- Automated repetitive communication tasks with PyAutoGUI and Pyperclip, reducing manual effort by 70%.
- Structured reusable workflow steps for message handling, response generation, and execution, enabling faster iteration and maintenance.

Face Detection using AI | *Python, OpenCV, Computer Vision*

Personal Project

- Developed a real-time computer vision application using OpenCV with processing performance of 25–30 FPS.
- Improved detection accuracy by 20% through image preprocessing and achieved more than 95% accuracy.
- Reduced processing latency by 35% and implemented multi-face tracking for real-time video analysis.
- Iterated on the detection pipeline to balance accuracy, latency, and reliable real-time execution.

EDUCATION

Chandigarh University

Mohali, Punjab

Bachelor of Engineering in Computer Science and Engineering; CGPA: 7.68

Expected 2027

+2 Government High School Sarai Ranjan

Samastipur, Bihar

Higher Secondary Education (12th Grade), BSEB; 61.4% (307/500), First Division

2021

High School Sarairanjan

Samastipur, Bihar

Secondary Education (10th Grade), BSEB; 65.6% (328/500), First Division

2019
